INTRODUCTION.

The present is the first volume of a List of Birds in the Indian Museum, on the plan of the Lists of Snakes and of Batrachians already brought out by Mr. W. L. Sclater.

It has been decided to publish the Hand-List of Birds in parts, owing to the large size of the collection, and to the desire which appears to be felt in India for such a list at an early date.

The manuscript of the present volume was prepared under the direction of Mr. Sclater before he left India, and my task has therefore been chiefly to see it through the press, after intercalating the numerous accessions since the work was written. Although several more Passerine families have been dealt with in this manuscript, and nearly the whole collection catalogued under my own directions, this instalment deals with the families of *Corvidæ* (Crows) *Paradiseidæ* (Birds of Paradise), *Ptilonorhynchidæ* (Bower-birds) and *Crateropodidæ* (Babblers and Bulbuls) only.

For, in view of the importance of the last-named group, so characteristic of the Old-World Tropics, in India, of the richness of our collection in types of its species, and of the nevertheless considerable number of our desiderata, it seemed desirable to bring out that part of the List which should deal with it with as little delay as possible.

I have departed slightly from Mr. Sclater's plan by only giving a single reference for each species—to the *Fauna of British India* volumes for Indian, and to those of the British Museum Catalogue of Birds for exotic, species.

The classification followed is of course that of the former work, with the foreign forms represented intercalated as nearly as possible in accordance with that of the latter. This has, of course, given some trouble, especially in a group like the *Crateropodidæ*, about which so much difference of opinion exists.

The following table shows the number of the species and specimens of Indian and Exotic birds of the families hereinafter dealt with, in the Museum :—

Number of species.

	Indian.	Exotic.	Total.
Corvidæ	54	49	103
Paradiseidæ.....	0	14	14
Ptilonorhynchidæ	0	6	6
Crateropodidæ	218	75	293

Number of specimens.

	Indian.	Exotic.	Total.
Corvidæ	726	169	894
Paradiseidæ.....	0	26	26
Ptilonorhynchidæ	0	23	23
Crateropodidæ	2132	226	2358

The number of species of *Corvidæ* and *Crateropodidæ* described by Mr. Oates in the Birds of British India was 315; to these may be added the following :—

Garrulus oatesi, Sharpe; *Garrulax waddelli*, Ogilvie Grant; *Crateropus larvatus*, Hartert; *Pomatorhinus imberbis*, Salvadori; *Proparus austeni*, Ogilvie Grant; *Turdinulus eassul*, Sharpe; *Ixulus clarki*, Oates; *Pycnonotus xanthorrhous*, Anderson; of which the first three species are new.

The number of species of the above two families of which types exist in the collection is 66, most of these having been described by Blyth; these types, like most of the comparatively few remaining specimens belonging to the Asiatic Society's collection, are naturally not in the best of condition, although every care has been taken of them. Most have now been taken out of their paper envelopes and placed in glass-lidded cardboard boxes for further security.

Wherever possible I have entered an Asiatic Society's specimen under its original number and lettering—some had been

re-entered; where the said numbering does not correspond with Blyth's, the specimen is one acquired by the Society since his time and recorded by Dr. J. Anderson in manuscript on an interleaved copy of the List in the Museum Library.

The principal contributors to the modern collection are Sir O. B. St. John, Lieut.-Col. Godwin-Austen, F.R.S., Dr. F. Stoliczka, Dr. W. T. Blanford, F.R.S.; Lieut.-Colonel J. Scully, I.M.S., Dr. John Anderson, F.R.S., and Lieutenant-Colonel C. T. Bingham, a large number of whose fine specimens from the Shan States was received after much of this list was printed, and will be found in the appendix.

In conclusion, I have to express my thanks to my assistants—at first Mr. H. W. Peal, and afterwards Messrs. C. & A. O. Paiva, for their industry in helping me in the present undertaking.

F. FINN,
Deputy Superintendent
of the Indian Museum.

SYSTEMATIC INDEX.

REFERENCES TO THE ORIGINAL DESCRIPTIONS.

(As given by Mr. W. L. Sclater, *Ibis*, 1892, p. 73.)

NOTE.—The type of *Lioparus chryseus*, has been apparently lost or mislaid; I have therefore omitted it from the list. To be added, are the types of *Cerasophila thompsoni*, Bingham, the only ones which have been added to the collection in the present families since the list was published.
